

Derone Enterprises

INNOVATOR Range Ball Pickers

Benefits of the INNOVATOR

- ◆ Thermoplastic alloy compound increases flexibility and extends disc life (35% denser than previous material).
- ◆ Heavier plating minimizes chipping and rust problems.
- ◆ Large, lubricated, steel yoke barrels provide a solid nine inches of surface to minimize wear. No bearings or bushings to replace.
- ◆ Drum Frames formed with rounded corners to increase strength and minimize damage to netting, fences, yardage markers and trees.
- ◆ Adjustable axle brackets eliminate the need to add washers and spacers as required on other units.
- ◆ No front or side wheels. Eliminates the constant maintenance and down time associated with unnecessary tires, wheels, and bearings.
- ◆ 3" x 1" steel tubing is virtually indestructible and designed to allow easy access to ball baskets.
- ◆ Modular construction facilitates the maintenance and/or replacement of all parts individually (bolt on, no welding).
